

## MOBILE RAISE/LOWER UNITS & BARREL TILTERS

**RIGAL BENNETT fixed raise/lower units are used with a number of mobile tanks to enable one mixer to mix several tanks.**

- Cranes must be selected to lift correct weight and have the ability to lift stirrer and shaft over top lift of vessel, then lower mixer to correct position.
- Mobile cranes have forward protruding legs which need to pass under or round tanks being mixed.
- Standard cranes are fabricated from painted mild steel but special stainless steel ones can be made.
- If forward leg gets in the way modification can sometimes be made.
- Choice of lifting units include hand/hydraulic, air, electric or hand winch.

Table below shows standard range but specials are available on request.

TYPE	OPERATED BY	CAPACITY KG	LIFT HEIGHT MM	HEIGHT OA	MAXIMUM REACH
H12HC	HAND	125	1980	3556	610
H15HC	HAND/HYD	150	2340	2340	1100
